

PUBLIC WORKS / MUNICIPAL

EHRA provides planning, design, and construction phase engineering services to municipal and private clients for wastewater systems ranging from neighborhood sanitary sewers to regional collection, diversion, and treatment systems. Our staff is experienced in operations and maintenance of wastewater systems and utilizes alternative analysis methods in the repair, rehabilitation, and upgrade of collection lines, force mains, pump stations, large trunk-lines, and wastewater treatment facilities. EHRA has experience with large diameter waterline design and construction, including but not limited to, coordination with cathodic protection and subsurface utility exploration team members.
